

Biscom Solutions

Enterprise Fax

Faxing is an integral part of business, but implementing and managing it can be difficult. Biscom's Solutions make it easy by providing powerful features and capabilities in five key areas:

- Powerful management capabilities for better tracking and reporting
- Technology options that provide the most flexibility and efficiency
- Simple but powerful features designed to give users more capabilities and control, wherever they are
- Seamless integration with existing applications and workflows
- Ability to meet or exceed security and compliance issues

Fax for Office

The most secure, reliable, compliant cloud faxing solution anywhere. If you have email, you can email to fax and fax to email. Now you can send and receive faxes within Outlook, Gmail, Office 365, and many other email systems. Faxing is as easy as attaching a document to your email and clicking send. No dedicated fax lines. No additional hardware. But unlike conventional email, FAXCOM Anywhere is secure.

- Send and receive faxes within Outlook, Gmail, Office 365, and other email systems
- Securely receive faxes from a local or toll free number with SMTP over TLS
- Quickly attach and send via secure email via our simple email client integration
- Receive faxes as PDF or TIFF files
- Route faxes to distribution lists

Secure File Transfer

Biscom Secure File Transfer (SFT) is a web-based solution that replaces insecure FTP and email to send and share files all while being easy enough for end users to operate without IT involvement.

- Share large and confidential files
- Create quick ad-hoc collaborative workspaces
- Use as a secure email solution
- Receive notification when your files are accessed
- Reduce your Exchange server mailbox size by re-routing attachments through Biscom SFT
- Auto-clean your server with expiration and deletion schedules
